## Benefits Piaçava using

The call thatched palm fiber is increasingly being used in construction modern and rustic ; currently it is one object of use in various types of architectural, landscape and decorative constructions ; replacing other materials, as thatch , which do not reach the freshness and rusticity, approaching nature. Practice placement, you can even make the design of its kiosks or piaçava roofs, how to maintain your work or palm fiber coverage, and, of course, with minimal cost.

## **Piaçava thatched x Sapê thatched** *What The Difference?*

## Our Environmental Responsibility

In its role as social and environmental responsibility , as well as preservation of nature through the replanting of palm fiber wool ; piaçava also contributes to open up jobs in the planting process , making the strip of palm fiber and construction of roofs or piaçava kiosks.

By the way, that the Piassava they replace the straw Sapê Imperata Brasillensis Trin ; one grass, not supported by agriculture; as well as having lower durability compared to straw palm fiber .

Thus, the Piaçava ® Divine , is also concerned with this idea ; so that different from thatch , A palm fiber , is a completely reforested product, not causing damage nature today or in the future damaging the same .

## Do you know?

The DIVINO PIAÇAVA® is the only company in the industry that has a certificate of sustainability facing the neutralization of CO2 emissions into the atmosphere . For this , we plant every year , a tree in Novo Horizonte in São Paulo, very close to Sao Jose do Rio Preto. This initiative arose from the concern of our company with the so-called sustainable development and eco-efficiency practices.

## Our consulting and project supporting

By being inserted in the market over the last 40 YEARS , we have a huge knowledge to give all the support and ADVICE from the application piassava in a simple KIOSK RESIDENTIAL until architectural projects and landscaped large CONSTRUCTION ENGINEERING in Brazil and Abroad.
